ZAMAK

Zamak (also known as Zamac) is a family of alloys with a base metal of Zinc and alloying elements of aluminum, magnesium, and copper.

Zamak alloys are most commonly used in the die casting industry. Their typical composition includes:

1. Aluminum (~4%): Strengthens the alloy and reduces the rate of mold erosion.
2. Copper (1% – 3%): Increases hardness and wear resistance.
3. Magnesium: Prevents intergranular corrosion and improves mechanical properties.

WARRANTY

Our 5-year mechanical warranty covers all internal moving components against functional defects. This reflects our commitment to precision engineering and long-lasting performance.
